

Warm_up_000_Exporting_to_PDF

December 13, 2024

1 Exporting Jupyter notebooks as a PDF

In visual studio code: in the line under the file name (“+ Code”, “+ Markdown”..) check “more actions”/“export”/“PDF”

To make this work, you need to install a couple of packages, see below:

We need a couple of packages installed in our environment

```
[ ]: pip install pandoc  
      pip install nbconvert PyPDF2
```

1.1 additional installations

You want to have pandoc and xelatex on your device. The former you can get by downloading and executing the .msc file that fits your system (linux, windows, mac): - <https://github.com/jgm/pandoc/releases/tag/3.1.11.1>

The latter you can get on the latex project (just install any major version): - <https://www.latex-project.org/get/#tex-distributions>

2 If all of this does not work...

Just save as html and then convert the html in your browser...
